

Topic Activities Year 5/6

Each activity should take between 2 – 6 hours as they require research to be carried out and need to be presented in a range of ways. We would advise that you spend a week on each activity.

Activity	Completed
Plan a healthy and varied menu for one week for you and your family. Show the different nutrients in each meal.	
Create a family tree for your family. Have any traits (such as eye or hair colour) been passed down? Show these on your design!	
Find out facts about Charles Darwin, his ideas on evolution and where he travelled to find out about them.	
Create a presentation (in a format of your choosing) on how factories quality control the products they make.	
Interview 3 different animals and discover why they are perfectly adapted for the environment they live in. You could write this as a newspaper interview or even record it on a phone or tablet!	
Write a poem, the first line of which is: "What came first, the chicken or the egg?"	
Create a board game (it could be similar to Snakes and Ladders) based around healthy eating or how food gets from the farm to your plate.	
We have been learning about 'Healthy me' during JIGSAW. Create a diary of the healthy things you have done or eaten each day.	

These are just some ideas and you may have other things you would like to do linked to your current learning in school. Please feel free to spend time exploring a subject that interests you and share your learning with us on our return.
